Message

By Chairman, Steering Committee

Acknowledgment

Introduction

Section One Advantages of Precast

Advantages

Examples Of Precast Projects

Section Two Precast Considerations

Use Of Precast

Personnel And Expertise

Planning And Layout

General Steps In Design

Selection Of Structural Precast Systems

Site Location

Costs

M & E Installation

Waterproofing

Section Three Architectural Components

Architectural Variety

Types Of Architectural Components

Balcony

Parapet

Canopy

Elevation Treatment

Facade Wall

Gable-End Wall

Prefab Bathroom

Light Weight Partition

Precision Block And Panel

Section Four *Catalogue Of Structural Precast Concrete Components*

Commercial and Institutional Buildings

Table 1A Recommended Sizes For Precast Slabs And Beams

Table 1B Recommended Sizes For Precast Columns

Residential Buildings

Table 2A Recommended Sizes For Precast Slabs And Beams

Table 2B Recommended Sizes For Precast Columns

Table 2C Recommended Thickness For Load Bearing Plain Wall

Industrial Buildings

Table 3A Recommended Sizes For Precast Slabs And Beams

Table 3B Recommended Sizes For Precast Columns

Other Structural Components

Staircase

Refuse Chute

Water Tank

Assembly Of Precast Components

Columns, Beams And Slabs

Multi-storey Carpark

Section Five *Use Of Prefabricated Reinforcement*

Advantages

Prefabricated Reinforcement Cages

Welded Wire Fabric

Table A Specification For Welded Wire Fabric

Table B Substitution Of Fabric For Mild Steel Bars

Table C Substitution Of Fabric For High Tensile Steel Bars

Appendix

Listing of Precasters

Listing of Drywall Suppliers

Listing of Reinforcement Suppliers

Listing of Contractors With Prefabricated Construction Experience

Summary of Precasters' Product Range
